Authors: Hongbin, Michael, Luis

Introduction:

 This retrospective will serve as documentation for the 2nd sprint.

Good Things:

- All planned user stories were completed
- Worked more effectively and organized together
- The broken image (esuminski/p3planetarium:10) didn't crash our cluster
- Unexpected occurrences (Grafana restart due to credential change) were resolved quickly and did not hinder completion of user stories too much

Opportunities for Improvement:

- Better note taking during implementation and incident processes.
- Better estimation on how long user stories will take to complete
- See if there's a way to save Grafana Alerts similar to how we can with dashboards

Wrap-Up:

Did well completing all user stories and reacting quickly to incidents. Reaction time for image rollback improved from last sprint, as well as our organization and teamwork. Estimation on user story completion still needs a bit of work. Additionally, documentation of user story implementation could be improved. We do not have enough time for a third story and will instead transition to working on the project showcase.
